Remove two bolts holding pallet jack door closed as shown to the right.

With these two bolts, removed the door should swing open.

Locate the horn (shown below). Remove the horn by removing the 9/16" bolt holding it in place.

Remove the power connector bracket that is located between the battery and chasis wall by removing the four self tapping bolts that are holding it in place. On the side where the horn was previously removed, drill out the four holes that the self tapping bolts were in using a 5/16" drill bit. Using the four sets of 1/4 - 20 bolts, washers and nuts, mount the 7160-0889 bracket between the outer wall and the power connector bracket using the drilled out holes.

Reattach the horn with the 9/16" bolt. Close the pallet jack door and reinsert the two bolts to lock the door back in place. Reconnect the power cable.
